

POWER SERVICES

Varley Power Services has been carrying out specialised mechanical maintenance work in the power generation and process industries since 1975. Using its experience in the industry to expand on a broad company skill base, Varley Power Services has become a recognised expert contractor in the fields of valve maintenance and specialised in-situ machining.

All site work is supported by fully equipped workshops specifically geared to handle all valve maintenance and other specialised equipment and overhaul work. Services are available on site at any location, within time frames that satisfy customers' plant and business requirements. The company has its base office in Newcastle NSW, and has support sites throughout Australia.

Specific capabilities of Varley Power Services include:

III Valve Refurbishment: safety valve testing and overhauls, in-situ overhauls, problem solving, scrapped valve recovery, extensive valve database and wide industry contacts and support.

III Ash and Dust Handling: overhauls of pumps, valves and piping systems, technical solution design and complete asset management.

III Sootblowers: overhaul of lances, wall blowers and poppet valves, redesign of componentry and the provision of spares on obsolete plants.

III Mechanical Maintenance: provision of high quality service for rotating plant in any location by a skilled mobile workforce with specialised mobile workshops.

III Plant Installation: plant, piping and structural installation, the manufacture and installation of process equipment, commissioning and lifetime asset management.

III Chemical Plant: design and installation of chemical dosing, maintenance and upgrade of water treatment plants, and the chemical cleaning of process boilers.

III Heat Exchangers: tube cleaning, plugging, tube lining and inserts, tube sheet repairs and complete replacement.

Varley Power Services prides itself on its ability to plan and complete large volumes of work within demanding time frames and to exacting specifications. Detailed reports on all work undertaken are provided with the option of having documentation upgraded into a plant improvement programme.
